Applied Bayesian Forecasting And Time

Applied Bayesian Forecasting and Time Series Analysis includes a complete theoretical development of the dynamic linear model, with each step demonstrated with analysis of real time series data. The result is a clear presentation of the Bayesian paradigm: quantified subjective judgments derived from selected models applied to time series observations.

A Bayesian Method for Time Series Data Analysis and Forecasting in Python. As described in [1] [2], time series data includes many kinds of real experimental data taken from various domains such as finance, medicine, scientific research (e.g., global warming, speech analysis, earthquakes), etc. Time series forecasting has many real applications in various areas such as forecasting of business (e.g., sales, stock), weather, decease, and others [2].
