## **Chapter 10 Introduction to Axiomatic Design**

Axiomatic design is a systems design methodology using matrix methods to systematically analyze the transformation of customer needs into functional requirements, design parameters, and process variables. Specifically, a set of functional requirements (FRs) are related to a set of design parameters (DPs) by a Design Matrix  $A: [F] = [D][P]$  The method gets its name from its use of design principles ...

## **Axiomatic Design and Fabrication of Composite Structures ...**

Axiomatic Design is a design concept that was introduced by Nam Pyo Suh who works at MIT, United States. It proposes a systematic approach for the design of products, processes, components, software etc. It applies a scientific approach for designing products according to customer needs. The below are the two main concepts of Axiomatic Design:

## **Axiomatic Design - What is Six Sigma**

Axiomatic Design is a design technique with a high added value because it reduces the number of possible initial designs to one while consuming almost no resources.<sup>41</sup> Thus, Axiomatic Design provides a conceptual design that satisfies the motivation. The configuration chosen is as close to the ideal design as the system permits.<sup>42</sup>
