Calculations Excel

1. Crane Weight The maximum weight of the crane to be used 50,000kgs (worst case scenario)
2. Load The maximum load to be lifted 22,000kgs + Load 1,500kgs.
3. Outrigger Load Point load = $(1+2) \times 100\% = (50,000 + 23,500) \times 1 = 73,500\text{kgs}$ or 73.5t.

Determine side thrust for jib crane: Use 20% of the sum of the lifted load and trolley equally distributed to each side as shown in figure 9.

Side thrust = 20% of combined weight of lifted load and Trolley
 $= (0.2 \times 4.4 + 85.84) = 18.05 \text{ kN} = 4.51 \text{ kN/wheel}.$

Detail Design and Analysis of A Free Standing I Beam Jib Crane

Get Free Basic Jib Crane

Calculations Excel

For jib cranes, the design load is based on the capacity, plus a hoist & trolley allowance (15% of capacity) and an impact allowance (25% of capacity). The allowable deflection of the crane is calculated using the design load plus the hoist allowance. Load testing can be performed to 125% of rated load capacity.

INTRODUCTION to JIB CRANES - Gorbels Inc.

The "Stowed jib deductions" row is what you would deduct if the jib was stowed on the base of the boom for the particular boom length. Gross Capacity Versus Net Capacity
The capacities listed in a crane's load chart are not the actual loads that can be lifted on the hook.
