Carbon Capture And Its Storage

Direct air capture is the process of
removing CO₂ directly from the ambient
air (as opposed to from point sources).
Combining DAC with carbon storage
could act as a carbon dioxide removal

This is what you need to know about carbon capture and storage

In pre-combustion carbon capture, the traditional burning of fossil fuels is disrupted by a gas produced by a combination of coal and oxygen. When met with water, the gas reacts and yields CO₂ that can be captured efficiently, and hydrogen that later aids
