Your timing belt should be replaced every 50,000-70,000 miles, depending on your car's make and model. Also, make sure you understand if your engine is an interference engine or a non-interference engine. In an interference engine, the valves and piston share the same airspace and the timing belt keeps them from touching. This is why you'll have a major engine failure on your hands if the belt breaks or skips.

The factory recommended replacement interval for the belt is 100,000 miles. The early 1993-'97 3.5L engines are non-interference engines, so if the timing belt snaps or jumps time, the engine won't bend any valves. The all-aluminum 1998-2010 engines, however, are interference engines. If the timing belt is not replaced at the recommended mileage, the risk of belt failure increases with every mile that's driven.

The 2.7 engine has both the timing chain and the water pump on the inside of the engine. To access it, it is required to remove the timing chain cover, which also acts as an engine mount, mounting the engine to the frame of the car. With the mount removed, the engine must be supported by a jackstand placed under the oil pan.
