Monitoring Technologies In Acute Care This is an introduction to the patient monitoring technologies that are used in today's acute care environments, including the operating room, recovery room, emergency department, intensive care unit, and telemetry floor. To a significant extent, day-to-day medical decision-making relies

### Monitoring Technologies In Acute Care Environments A ...

Current glucose monitoring technology appears inadequate for the management of diabetic surgical and in critically ill patients requiring intensive insulin therapy. Subcutaneous sensors measure interstitial fluid glucose, and this technology has not yet been shown to provide the timely and accurate measurements necessary for intravenous insulin administration in surgical and critical care patients on intensive insulin therapy.

### Glucose Monitoring in Acute Care: Technologies on the Horizon

When a newly adopted technology is introduced in an acute care setting, there are often discussions that guide the use of that technology, or implementation decisions. These decisions could include specific guidelines and instructions for use or rules about supervision.

### Implementation of newly adopted technology in acute care ...

In addition, cognitive assessment technologies, reminder systems and cognitive monitoring, and stimulation technologies, which focus on the mental health and wellness of seniors, are also classified under this category. Finally, these technologies include physical exercise and rehabilitation technologies.
